TABLE OF CONTENTS

INTRODUCTION

CANADA PENSION PLAN

Calendar Year
1. Monthly Average of Benefits
2. Monthly Average of New Benefits
3. Net P ·ments
4. Average Monthly Payments
5. Revenues
6. Administrative Costs

Fiscal Year
7. Monthly Average of Benefits
8. Monthly Average of New Benefits
9. Net Payments
10. Average Monthly Payments
11. Revenues
12. Administrative Costs

13. Number of Beneficiaries by Sex and by Age

Calendar Year
14. Contributors and Contributions by Sex
15. Average Earnings and Contributions by Sex
16. Maximum Monthly Rate of New Benefits - CPP and QPP
17. Flat Rate Portion fo New Benefits
18. Maximum Earnings and Contributions

QUEBEC PENSION PLAN

Calendar Year
19. Monthly Average of Benefits
20. Monthly Average of New Benefits
21. Net Payments
22. Average Monthly Payments

Fiscal Year
23. Monthly Average of Benefits
24. Monthly Average of New Benefits
25. Net Payments
26. Average Monthly Payments

Calendar Year
27. Contributors and Contributions

OLD AGE SECURITY PROGRAMS

28. Maximum Monthly Rates

Calendar Year
29. Maximum Annual Rates
30. GIS - Reduced and Zero Benefit Income Levels by Payment Marital Status
31. Monthly Average of Beneficiaries
32. Net Payments
33. Average Payments
34. OAS - Monthly Average of Beneficiaries by Rate
35. GIS - Monthly Average of Beneficiaries by Payment Marital Status
36. SPA - Monthly Average of Beneficiaries by Payment Marital Status

Fiscal Year
37. Monthly Average of Beneficiaries
38. Net Payments
39. Average Payments
40. OAS - Monthly Average of Beneficiaries by Rate
41. GIS - Monthly Average of Beneficiaries by Payment Marital Status
42. SPA - Monthly Average of Beneficiaries by Payment Marital Status

43. Number of Beneficiaries by Sex and by Age

SUPPLEMENTARY DATA

44. Average Weekly Wages and Salaries
45. Consumer Price Index, 1971 Base Year
46. Consumer Price Index, 1981 Base Year
47. Consumer Price Index, 1986 Base Year
48. Consumer Price Index, 1992 Base Year
49. Low Income After-Tax Cut-Offs by Size of Area of Residence

CALCULATIONS

A. OAS: Calculation of New Benefits
B. CPP: Calculation of Benefits
C. CPP: Contribution Rates
D. CPP: Calculation of Maximum New Benefits
E. GIS & SPA: Calculation of Income Reduction and Cut-Off Point
- E.1 GIS Single
- E.2 GIS Married - Two Pensioners
- E.3 GIS Married - Spouse is not a pensioner
- E.4 GIS Married - Spouse receives SPA
- E.5 SPA - Spouse is pensioner
- E.6 SPA - Surviving Spouse

TABLE DES MATIÈRES

INTRODUCTION

RÉGIME DE PENSIONS DU CANADA

Année civile

1. Moyenne mensuelle de prestations
2. Moyenne mensuelle de nouvelles prestations

1999	409.67	748.91	214.09	260.72	187.81	*2281.20
2000	421.18	741.32	211.39	266.22	190.80	2,135.33

*As of 1999, the average net payment for the death benefit was calculated as net payments divided by the number of benefits in pay.

(1) The number of benefits paid by the supplementary cheques system and under international agreements on social security were not available prior to January 1986.

(2) Increase in average monthly payment due to an increase in the flat rate portion of over $148.00.

Source: Income Security Programs, Monthly Statistics

*Depuis 1999, le versement moyen net pour la prestation de décès est calculé comme étant des paiements nets divisés par le nombre de prestations versées.

(1) Le nombre de prestations payées par le système de chèques supplémentaires et sous les accords internationaux de sécurité sociale n'ont pas été disponibles avant janvier 1986

(2) La moyenne mensuelle du paiement a substantiellement augmentée à cause de la portion du taux uniforme de plus de $148.00 par personne invalide.

* The Allowance for the survivor was averaged over a period of 7 months for the 1985 fiscal year, since this benefit started only in September of that year.

* L'Allocation au survivant a été calculée sur une période de 7 mois pour l'année financière de 1985 car cette prestation n'a débuté qu'en septembre de cette année.

* An integrated Survey (SEPH) was developed, adding earnings and hours data to the Small Business and Non Commercial Institutions components. A revised historical series based on the 1980 SIC extends back to January 1983.

Source: Employment, Earnings and Hours
Statistics Canada, Cat. 72-002-XPB

*Un sondage intégré (EERH) a été préparé, ajoutant les données sur les gains et les heures aux composantes des petites entreprises et des établissements non commerciaux. Une série chronologique révisée fondée sur le code CTI de 1980 remonte à Janvier.

E. GUARANTEED INCOME SUPPLEMENT (GIS) AND THE ALLOWANCE (ALW)
CALCULATION OF INCOME REDUCTION AND CUT-OFF POINT

Reduction Point: Level of income where the GIS or the ALW starts being paid at a different rate. Generally, this point corresponds to the exemption point.

Cut-Off Point: Level of income where the GIS or the ALW ceases to be paid and then equals zero.

Pensions are rounded to the cent [Reg. 7].

E.1 GIS SINGLE

Paid to a single OAS pensioner [Act. Sect. 10]

Under the reduction point, which is at $24.00 of annual income, the GIS is paid at the maximum single rate. The GIS is paid at the partial rate from $24.00 of annual income to the cut-off point, where the GIS becomes zero.

To calculate the cut-off point (where GIS becomes zero), the maximum monthly GIS at the single rate is rounded up to the next dollar value and then multiplied by 2 and by 12 (to get an annual figure). The multiplication by 2 corresponds to a reduction rate of 50% in GIS.

Eg. For October 2001:

The reduction point: $24.00
The cut-off point is calculated as follows: GIS Single Rate = $526.08 = $527.00 (rounded up)
Cut-off point = $527.00 x 2 x 12 = $12,648

Source: Old Age Security Act, Section 10 and Regulations.

E. GUARANTEED INCOME SUPPLEMENT (GIS) AND THE ALLOWANCE (ALW)
CALCULATION OF INCOME REDUCTION AND CUT-OFF POINT

E.2 GIS MARRIED - PENSIONER

Paid to a married couple where both are OAS pensionable [Act. Sect. 10].

Under the reduction point, which is at $48.00 of annual combined income of the couple, the GIS is paid at the maximum married rate. The GIS is paid at the partial rate from $48.00 of annual income to the cut-off point, where GIS becomes zero.

To calculate the cut-off point (where GIS becomes zero), the maximum monthly GIS at the married rate is rounded up to the next dollar value and then multiplied by 4 and by 12 (to get an annual figure). The multiplication by 4 corresponds to a reduction rate of 25% per pensioner in GIS.

Eg. For October 2001:

The reduction point: $48.00
The cut-off point is calculated as follows: GIS Married Rate = $342.67 = $343.00 (rounded up)
Cut-off point = $343.00 x 4 x 12 = $16,464

Source: Old Age Security Act, Section 10 and Regulations.

E. GUARANTEED INCOME SUPPLEMENT (GIS) AND THE ALLOWANCE (ALW)
CALCULATION OF INCOME REDUCTION AND CUT-OFF POINT

E.3 GIS MARRIED - NON-PENSIONER

Paid to an OAS pensioner whose spouse is not an OAS pensioner [Act. Sect. 10].

The GIS is paid at the maximum single rate up to the reduction point, which corresponds to the equivalent of an annual OAS pension plus $48.00. The GIS is paid at the partial rate from the reduction point to the cut-off point, where GIS becomes zero.

To calculate the reduction point (where GIS starts to be reduced), the maximum monthly amount of OAS for the current quarter is rounded up to the next highest dollar. This could correspond to a dummy reduction rate of 100% in OAS. The amount so obtained represents the lower limit of the last income bracket where the GIS is still paid at the maximum rate.

To calculate the cut-off point (where GIS becomes zero), the maximum monthly GIS at single rate is rounded up to the next dollar value and then multiplied by 4 and by 12 (to get an annual figure). The multiplication by 4 corresponds to a reduction rate of 25% in GIS. Then, this is added to the equivalent of an annual OAS pension (rounded up to the next highest dollar value which is divisible by 4), at the current rate.

Eg. For October 2001:

The reduction rate is calculated as follows:

OAS/4 = $442.66/4 = $110.665 = $111.00 (rounded up)
Reduction point = ($111.00 x 4 x 12) + $48.00 = $5,376

The cut-off point is calculated as follows:

GIS Single Rate = $526.08 = $527.00 (rounded up)
Cut-off point = ($527.00 x 4 x 12) + ($111.00 x 4 x 12) = $30,624

E. GUARANTEED INCOME SUPPLEMENT (GIS) AND THE ALLOWANCE (ALW)
CALCULATION OF INCOME REDUCTION AND CUT-OFF POINT

E.4 GIS MARRIED - AN ALLOWANCE RECIPIENT

Paid to an OAS pensioner where the spouse receives a ALW. [Act. Sect. 10 and 17.4].

The GIS is paid at the maximum married rate up to the reduction point, which represents 4/3rds of the equivalent of an annual OAS pension at the current rate rounded to the next highest multiple of $3, plus $48.00. The GIS is paid at the partial rate from the reduction point to the cut-off point, where GIS becomes zero.

To calculate the reduction point (where GIS starts to be reduced), the maximum monthly amount of OAS for the current quarter is rounded up to the next highest dollar value which is divisible by 3. Then, it is multiplied by 4 and by 12 (to get an annual figure). The division by 3 and the multiplication by 4 correspond to a dummy reduction rate of 75% in OAS. The amount so obtained represents the lower limit of the last income bracket where the GIS is still paid at the maximum rate. The amount of $48.00 must be added to the final reduction point.

To calculate the cut-off point (where GIS becomes zero), the maximum monthly GIS at the married rate is rounded up to the next dollar value and then multiplied by 4 and by 12 (to get an annual figure). The multiplication by 4 corresponds to a reduction rate of 25% in GIS. Then, this is added to 4/3rds of the rounded monthly pension equivalent (rounded up to the next highest dollar value) multiplied by 12.

Eg. For October 2001:

The reduction rate is calculated as follows:
OAS/3 = $442.66/3 = $147.55 = $148.00 (rounded up)
Reduction point = ($148.00 x 4 x 12) + $48.00 = $7,152

The cut-off point is calculated as follows:
GIS Married Rate = $342.67 = $343.00 (rounded up)
Cut-off point = ($343.00 x 4 x 12) + ($148.00 x 4 x 12) = $23,568

Source: Old Age Security Act, Section 10 and 17.4 and Regulations.

E. GUARANTEED INCOME SUPPLEMENT (GIS) AND THE ALLOWANCE (ALW)
CALCULATION OF INCOME REDUCTION AND CUT-OFF POINT

E.5 THE ALLOWANCE - REGULAR

The ALW is composed of two portions: the OAS equivalent portion, paid at full or partial rate depending on residence of the person, and the GIS equivalent portion, paid at married rate. In these calculations, it will be assumed that the OAS equivalent is paid at full rate.

Under the reduction point, which is $48.00 of annual combined income of the couple, the ALW is paid at the maximum rate. From $48.00 of annual income to the first cut-off point, the OAS equivalent portion of ALW is paid at the reduced rate while the GIS equivalent portion continues to be paid at the maximum married rate. Between the first cut-off point and the second reduction point, the OAS equivalent portion of ALW equals zero, while the GIS equivalent portion is still paid at full rate. From the second reduction point to the second cut-off point, the OAS equivalent portion of the ALW equals zero while the GIS equivalent portion is the paid at partial rate. At the second cut-off point, ALW equals zero.

To calculate the first cut-off point, the maximum monthly amount of OAS is rounded up to the next highest dollar value which is divisible by 3. Then, it is multiplied by 4 and by 12 (to get an an annual figure). The division by 3 and the multiplication by 4 correspond to a reduction rate of 75% in the OAS equivalent portion. The amount so obtained represents the lower limit of the last income bracket where the OAS equivalent portion equals zero but the GIS equivalent portion is still paid at maximum rate. This is the first cut-off point. The amount of $48.00 must be added to find the second reduction point where the GIS portion begins to be reduced.

To calculate the second cut-off point (where the GIS equivalent portion becomes zero), the maximum monthly GIS at the married rate is rounded up to the next dollar value and multiplied by 4 and by 12 (to get an annual figure). The multiplication by 4 corresponds to a reduction rate of 25% in the GIS portion. Then, it is added to the equivalent of 4/3rds of the rounded OAS (rounded up the next highest dollar value) as calculated for the first cut-off point.

Eg. For October 2001:

The first reduction point: $48.00

The first cut-off point is calculated as follows:	OAS/3 = $442.66/3 = $147.55 = $148.00 (rounded up) Cut-off point = ($148.00 x 4 x 12) = $7,104
The second reduction point:	$7,104.00 + $48.00 = $7,152
The second cut-off point is calculated as follows:	GIS Married Rate = $342.67 = $343.00 (rounded up) Cut-off point = ($343.00 x 4 x 12) + ($148.00 x 4 x 12) = $23,568

Source: Old Age Security Act, Section 17.4 and Regulations.

E. GUARANTEED INCOME SUPPLEMENT (GIS) AND THE ALLOWANCE (ALW)
CALCULATION OF INCOME REDUCTION AND CUT-OFF POINT

E.6 THE ALLOWANCE - SURVIVOR

The ALW is composed of two portions: the OAS equivalent portion, paid at full or partial rate depending on residence of the person, and the GIS equivalent portion, paid at the married rate. In these calculations, it will be assumed that the OAS equivalent is paid at full rate.

Under the first reduction point, which is $48.00 of annual income of the surviving spouse, the ALW is paid at the maximum rate. From $48.00 of annual income to the first cut-off point, the OAS equivalent portion of ALW is paid at the reduced rate while the GIS equivalent portion continues to be paid at the maximum married rate. From the first cut-off point to the second reduction point, the OAS equivalent portion of ALW equals zero while the GIS equivalent portion is paid at the full rate. From the second reduction point to the second cut-off point, the OAS equivalent portion equals zero while the GIS equivalent portion is paid at the partial rate. At the second cut-off point, ALW equals zero.

To calculate the first cut-off point, the maximum monthly amount of OAS is rounded up to the next highest dollar value which is divisible by 3. Then, it is multiplied by 4 and by 12 (to get an an annual figure). The division by 3 and the multiplication by 4 correspond to a reduction rate of 75% in the OAS equivalent portion. The amount so obtained represents the lower limit of the last income bracket where the OAS equivalent portion equals zero but the GIS equivalent portion is still paid at maximum rate. The amount of $24.00 must be added to find the second reduction point where the GIS portion begins to be reduced.

To calculate the second cut-off point (where the GIS equivalent portion equals zero), the portion of extended ALW (equal to the Maximum ALW Widowed Rate less the Maximum OAS) is rounded up to the next dollar value and multiplied by 2 and by 12 (to get an annual figure). The multiplication by 2 corresponds to a reduction rate of 50% in the GIS portion. Then, it is added to the equivalent of 4/3rds of the rounded OAS (rounded up the the next highest dollar value) as calculated for the first cut-off point.

Eg. For October 2001:

The first reduction point: $48.00	
The first cut-off point is calculated as follows:	OAS/3 = $442.66/3 = $147.55 = $148.00 (rounded up) Cut-off point = ($148.00 x 4 x 12) = $7,104
The second reduction point:	$7,104.00 + $24.00 = $7,128
The second cut-off point is calculated as follows:	Portion of extended ALW = $424.36 = $425.00 (rounded up) Cut-off point = ($425.00 x 2 x 12) + ($148.00 x 4 x 12) = $17,304
